AI ETHICS CONFERENCE

UNESCO • MODEL UNITED NATIONS

GLOBAL AI GOVERNANCE: ETHICS, ACCOUNTABILITY, AND HUMAN RESPONSIBILITY

AT A GLANCE • 10 COUNTRY DELEGATIONS • 3 ROUNDS • 90 MINUTES

1. Committee & agenda

Committee: UNESCO — United Nations Educational, Scientific and Cultural Organization

Agenda: “Addressing the Ethical, Educational and Cultural Implications of Generative Artificial Intelligence?”

Agenda brief

Artificial Intelligence (AI) is transforming how societies learn, communicate, create, and preserve knowledge. AI-powered tutoring, automated translation and generative tools offer significant possibilities, while also raising concerns about misinformation, bias, copyright, data privacy, academic integrity and unequal access.

UNESCO adopted its Recommendation on the Ethics of Artificial Intelligence in November 2021, endorsed by 193 Member States. It emphasizes human rights, transparency, accountability, fairness and human oversight, particularly in education, culture, communication and information.

National approaches to AI governance remain varied. Delegates will explore international cooperation, cultural diversity, fair access to AI in education, intellectual property safeguards, misinformation and shared ethical standards that protect human dignity.

2. Conference concept & objective

Delegates represent countries and debate the appropriate role of AI in decisions affecting education, healthcare, employment, law, security and public services. Discussions consider bias, privacy, misinformation, overdependence and accountability.

Objective: Develop diplomatic and critical-thinking skills and propose responsible approaches to AI governance that preserve meaningful human judgment.

3. Participating countries

United States • China • United Kingdom • France • Germany • India • United Arab Emirates • Saudi Arabia • Japan • South Korea

4. Event schedule | 90 minutes

Stage	Duration	What to expect
Opening briefing	5 min	Agenda, procedure and instructions
Round 1 · General Speakers’ List	20 min	1-minute opening statements by country delegates
Round 2 · AI Power Bloc Formation	20 min	Informal negotiation and alliance formation
Round 3 · Resolution & Debate	30 min	Bloc proposals, questions and chair-approved debate
Judging & closing	10 min	Evaluation and concluding announcement
Transition buffer	5 min	Movement and procedural adjustments
TOTAL	90 min	

5. Detailed round instructions

Round 1 — General Speakers’ List (GSL) | 20 minutes

Each delegate delivers a 1-minute speech introducing their country’s position, relevant policies, challenges and priorities under the agenda. Follow the chairs’ speaking order and timing.

Round 2 — AI Power Bloc Formation | 20 minutes

Following the GSL, delegates enter informal discussions to form blocs based on their countries' AI capabilities, needs and policy positions. The central question is whether advanced AI should remain a strategic national advantage or be made more accessible through fair and responsible international arrangements.

Illustrative position: An AI superpower bloc may argue that advanced chips, models, data and other capabilities are strategic national assets and should be shared only with safeguards for economic and security risks. Bloc composition is determined by the delegates during the session.

Round 3 — Global AI Access Resolution | 30 minutes

Each bloc prepares and presents a final proposal addressing the agenda. The strongest practical, ethical and defensible proposal is selected as the Global AI Access Resolution. Chair-approved formal or informal debate may take place; interventions are limited to 2 minutes.

6. Required elements of each bloc proposal

Element	Guiding question
1 · Main position	Is advanced AI a global right, a national advantage, or a controlled shared resource?
2 · Access plan	Who may access advanced AI, and subject to what conditions?
3 · Safety plan	How will misuse, cyberattacks, deepfakes, bias and data exploitation be addressed?
4 · Accountability	Who bears responsibility when AI causes harm: governments, companies, developers or users?
5 · Benefit-sharing	How can developing countries benefit without becoming dependent on AI superpowers?

7. Judging rubric

Criterion	Marks
Practical solution	10
Ethical reasoning	10
Protection for disadvantaged countries	10
AI safety and accountability	10
Strong presentation	10
Strong defense during questioning	10
TOTAL	60

Chair's note: The event follows the published 90-minute programme. Chairs may manage speaking order and transitions to keep all three rounds within the allotted time.
