AI Studio Video Challenge: Participant Briefing

Oct 12, 2026 · @Senthilkumar Gandhi

Overview

Each team has 1 hour 30 minutes to create a finished AI-generated video of 1:00 to 1:30 on a topic revealed only on the day. You get professional AI video tools from us, a fixed pool of credits to share across a higher-tier model and a low-tier model, and no way to buy more. The challenge tests how well you plan, spend limited resources, and tell a story under pressure.

Teams

Each team has exactly 3 members. All three may work on the same shared credit pool and the same final video. We suggest splitting the work, but the split is up to you:

- Director / prompt lead: owns the concept, script and the prompts sent to the models
- Generator / credit manager: runs the generations and tracks credit spend
- Editor / finisher: assembles clips, adds audio and text, and exports the final video

Format and time

The topic is announced on the spot when the clock starts. You have 1 hour 30 minutes in total, covering planning, generation, editing and final export. The final video must be submitted before time runs out; anything unfinished at the cutoff is not judged.

Suggested pacing (a guide, not a rule):

1. 0:00 to 0:10: read the topic, agree the concept, write a rough shot list
2. 0:10 to 0:55: generate clips, testing ideas on the low-tier model first
3. 0:55 to 1:15: edit, add voice, music and text
4. 1:15 to 1:30: final check, export and submit

Start time: [time]. Submission deadline: [time]. Submission method: [upload link / folder].

Video requirements

The final video must run between 1:00 and 1:30. A video shorter than 1:00 or longer than 1:30 is non-compliant and [will be penalised / will be disqualified: confirm]. The video must be about the topic announced on the day and must be a single finished piece, not a collection of clips. Export format: [e.g. MP4, 1080p].

Tools, models and credits

Every team gets access to the same two AI video models and one fixed pool of credits to spend across both.

	Higher-tier model	Low-tier model
Name	[model name]	[model name]
Quality	Higher quality, better realism and motion	Weaker output, less consistent
Cost	Expensive per generation	Cheap per generation
Best used for	Hero shots and key moments	Drafts, tests and filler shots

Credit pool per team: [number] credits, shared across both models. Credits cannot be topped up, transferred or borrowed between teams. When they run out, you can no longer generate with our tools, so plan your spend.

Outside tools: you may use other tools only if they are completely free (for example free editors, free music or free voice tools). No paid software, paid plans or paid credits are allowed beyond what we provide. Free trials that need payment details count as paid and are not allowed.

Rules and constraints

- Teams of exactly 3 members
- 1 hour 30 minutes total, from topic reveal to final submission
- Topic is revealed on the day and cannot be prepared in advance
- Final video length: 1:00 to 1:30
- One fixed credit pool per team, shared across both models, no top-ups
- Only the tools we provide plus free tools; no paid software

- Work must be created during the session; pre-made footage or assets brought from outside are not allowed [confirm]
- Decisions by the organisers and judges are final

Judging rubric

Judges score each video out of 100 using the criteria below.

Criterion	Points	What judges look for
Concept and storytelling	25	Clear idea, strong opening, a beginning, middle and end that fit the topic
Relevance to the topic	15	The video clearly answers the topic given on the day
Visual quality and consistency	20	Sharp, coherent visuals; consistent style, characters and look across clips
Smart use of models and credits	15	The higher-tier model used where it counts, the low-tier model used wisely, no wasted credits
Editing and polish	15	Smooth cuts, pacing, audio, text and transitions; feels finished
Compliance and creativity	10	Length within 1:00 to 1:30, rules followed, original and memorable approach
Total	100	

Tie-break: higher score in Concept and storytelling. [Confirm weights and tie-break.]

Tips for teams

- Agree on one simple idea in the first 10 minutes; a clear story beats a complex one
- Test prompts on the low-tier model, then spend higher-tier credits only on the shots that matter
- Keep one person tracking credit spend so you never run dry before the final clips
- Keep characters, colours and style consistent across prompts
- Generate a little more footage than 1:30 so the editor has room to cut

- Leave the last 15 minutes for export; a late or broken file cannot be judged
