AI ETHICS PANEL

UNESCO • MODEL UNITED NATIONS

GLOBAL AI GOVERNANCE: ETHICS, ACCOUNTABILITY, AND HUMAN RESPONSIBILITY

AT A GLANCE • 10 COUNTRY DELEGATIONS • 3 ROUNDS • 90 MINUTES

1. Committee and agenda

Committee: UNESCO Crisis — United Nations Educational, Scientific and Cultural Organization Crisis Committee

Agenda: “Addressing the Ethical, Educational and Cultural Implications of Generative Artificial Intelligence”

Agenda clarification: The agenda may differ from the trigger provided.

Agenda brief

Artificial intelligence (AI) is transforming how societies learn, communicate, create and preserve knowledge. AI-powered tutoring, automated translation and generative tools offer significant opportunities, while raising concerns about misinformation, bias, copyright, data privacy, academic integrity and unequal access.

In November 2021, UNESCO adopted its Recommendation on the Ethics of Artificial Intelligence, endorsed by 193 Member States. The Recommendation emphasises human rights, transparency, accountability, fairness and human oversight, particularly in education, culture, communication and information.

National approaches to AI governance vary. Delegates will examine international cooperation, cultural diversity, equitable access to AI in education, intellectual property safeguards, misinformation and shared ethical standards that uphold human dignity.

2. Conference concept and objective

Delegates will represent their countries and debate the appropriate role of AI in decision-making across education, healthcare, employment, law, security and public services. Discussions will address bias, privacy, misinformation, overreliance on AI and accountability.

Objective: To develop diplomatic and critical-thinking skills and formulate responsible approaches to AI governance that preserve meaningful human judgement.

3. Event schedule | 90 minutes

Opening briefing	5 min	Agenda overview, procedures and instructions
Round 1 · Provisional Speakers' List	20 min	One-minute opening statements by country delegates
Round 2 · Bloc Formation	20 min	Informal negotiation and alliance formation
Round 3 · Public Directive	30 min	Bloc proposals, questions and chair-approved debate
Judging and closing	10 min	Evaluation and closing announcement
Transition buffer	5 min	Transitions and procedural adjustments
TOTAL	90 min	

4. Detailed round instructions

Round 1 — Provisional Speakers' List (PSL) | 20 minutes

Each delegate will deliver a one-minute speech outlining their country's position, relevant policies, challenges and priorities in relation to the trigger provided. Delegates must follow the speaking order and time limits set by the chairs.

Round 2 — Bloc Formation | 20 minutes

Following the PSL, delegates will engage in informal discussions to form blocs based on their countries' AI capabilities, needs and policy positions. The central question is whether advanced AI should remain a strategic national advantage or become more accessible through equitable and responsible international arrangements.

Illustrative position: An AI superpower bloc may argue that advanced chips, models, data and related capabilities are strategic national assets and should be shared only with safeguards against economic and security risks. Delegates will determine bloc composition during the session.

Round 3 — Global AI Access Resolution | 30 minutes

Each bloc will prepare and present a final proposal addressing the agenda. The strongest proposal, assessed for its practicality, ethical merit and defensibility, will be selected as the Global AI Access Resolution. Formal or informal debate may take place with the chairs' approval; interventions are limited to two minutes.

5. Required components of each bloc proposal

1 · Main position	Should advanced AI be regarded as a global right, a national advantage or a controlled shared resource?
2 · Access plan	Who should have access to advanced AI, and under what conditions?
3 · Safety plan	How will the proposal address misuse, cyberattacks, deepfakes, bias and data exploitation?
4 · Accountability	Who should bear responsibility for harm caused by AI: governments, companies, developers or users?
5 · Benefit-sharing	How can developing countries benefit from advanced AI without becoming dependent on AI superpowers?

6. Judging rubric

Practicality of the proposed solution	10
Ethical reasoning	10
Protection for disadvantaged countries	10
AI safety and accountability	10
Effectiveness of presentation	10
Strength of defence during questioning	10
TOTAL	60

Chair’s note: The event will follow the published 90-minute programme. Chairs may adjust the speaking order and manage transitions to ensure that all three rounds are completed within the allotted time.
